VNC's Woodtone Series Concentrated Tints.

Rich tints to transform the look of your wood.

Vermont Natural Coatings Woodtone Series Concentrated Tints are color rich, fade resistant and will transform the look of wood surfaces. These tints mix quickly and have superior colorfastness, ensuring consistent tone throughout the project. With zero VOC content and no flash point, Woodtone Series Concentrated Tints provide safe, professional color during and after application.

Characteristics:

- Instant dispersion
- Excellent transparency
- Stays in suspension

Recommended uses:

Mix with clear PolyWhey® interior wood finishes to achieve desired color or to match ready-to-use PolyWhey Furniture Tints on interior wood surfaces. PolyWhey is the next generation of polyurethane, a truly waterborne wood finish that meets the highest professional and environmental standards.

Application:

Suggested mix ratio is 4 oz per gallon of PolyWhey. May be applied by brush, rag, spray or paint pad. Test before you apply to project surface.

Other uses:

May be mixed with water or alcohol to create a wood stain. May also be mixed with other water-based finishes.

Woodtone Series Concentrated Tints
