

Engineered Symmetry Structure

4mm strand woven top layer is a very dense material that provides excellent wear resistance, is coloured throughout creating beautiful, permanent, natural colours, is coated with top rated German made commercial finish, with low sheen

Traditional 6mm cross layer bamboo core allows for easy nailing which prevents dimpling, can be floated, allows for expansion and contraction without stressing the glue bond and reduces the acclimation period

4mm strand woven wear layer + 6mm traditional bamboo cross core + 4mm strand woven bottom layer completes the balanced Symmetry structure that provides a more dimensionally stable floor and resists cupping and warping
